Breastfeeding - Wikipedia
Breastfeeding, or nursing, is the process by which human breast milk is fed to a child. Breast milk may be from the breast, or may be expressed by hand or pumped and fed to the infant. The World Health Organization (WHO) recommends that breastfeeding begin within the first hour of a baby's life and continue as often and as much as the baby wants.

**Nutrition for Healthy Term Infants: Recommendations from**
The goal in infant-led feeding is for the mother to recognize and respond to the infant’s appetite, hunger, and fullness cues. Hunger cues include restlessness, rooting, or sucking on a hand. Infants who are fed when they are hungry, and suckling effectively, will obtain what they need for satisfactory growth.

**Feeding your newborn: Tips for new parents - Mayo Clinic**
Apr 04, 2020 · Most newborns need eight to 12 feedings a day — about one feeding every two to three hours. Look for early signs of readiness to feed, such as moving the hands to the mouth, sucking on fists and fingers, and lip smacking. Fussing and crying are later cues. The sooner you begin each feeding, the less likely you’ll need to soothe a frantic baby.
